                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     JOURNEY APPLICATION US/09949016

Patent No. 681239

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

PRIOR PRILING DATE: 2000-04-14

PRIOR PELING DATE: 2000-10-20

PRIOR PILING DATE: 2000-10-20

Sequence 15952, Application US/09949016

Sequence 15952, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

PAPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REPERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-10-20

PRIOR PLING DATE: 2000-10-20

PRIOR PLING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FRESEEQ for Windows Version 4.0

SEQ ID NO 15952

LENTHH: 119601

Sequence 17361, Application US/09949016

Sequence 17361, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: WENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CLOO1307

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/231,768

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR FILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 17361
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

US-09-599-360B-38/C

Sequence 38, Application US/0959360B

Patent No. 6548633

GENERAL INFORMATION:

APPLICANT: Dunas Milne Edwards, J.B.

APPLICANT: Dunas Milne Edwards, J.B.

APPLICANT: Bougueleret, L.

APPLICANT: Complementary DNA's Encoding Proteins with Signal Peptides

TITLE OF INVENTION: Complementary DNA's Encoding Proteins with Signal Peptides

TITLE OF INVENTION: Complementary DNA's Encoding Proteins with Signal Peptides

FILE REPERENCE: GENSET.050CP3

CURRENT APPLICATION NUMBER: US/09/599,360B

PRIOR PILING DATE: 1999-12-22

PRIOR PILING DATE: 1999-12-22

PRIOR FILING DATE: 1999-12-21

NUMBER OF SEQ ID NOS: 123

SOFTWARE: Patent.pm

SEQ ID NO 38

LENCHTH: 1888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                       Sequence 3518, Application US/09107532A
Patent No. 6583275
GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
TITLE OF INVENTION: ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 12, Application US/09722377

Sequence 12, Application US/09722377

Patent No. 6791007

GENERAL INFORMATION:
APPLICANT: Schulze-Lefert, Paul MJ
APPLICANT: Schulze-Lefert, Paul MJ
APPLICANT: Buschges, Rainer
TITLE OF INVENTION: Polynucleotide and its use for modulating a defence TITLE OF INVENTION: response in plants
FILE REFERENCE: 620-58
